local machine (source code never leaves)
cloud
Task workspace
buggy module with docstrings, visible tests
reads
Interface extractor
signatures, docstrings, type fields (AST); no function bodies
interface only
Contract-test writer
stronger model writes one unittest module per task from the interface alone
edits
test module
Independent check
visible tests + hidden holdout, shown to neither model
run ends
Local agent
gemma4:12b edits code until visible and contract tests pass
installs
Static validator
allowed imports and calls only; TestCase present
verified / silent false success
